

Long-Term Roof Protection: Maximize Roof Life. Delay Replacement.

Weatherproofing Technologies Canada (WTC) offers a full range of sophisticated analytical, maintenance and information-based services with one simple goal to maximize the life of your roofs and protect the value of your buildings.

Small roofing problems like leaks and debris can snowball into large, expensive issues. Fortunately, you can reduce the possibility of that happening with TremCare, a comprehensive roof maintenance program that helps prevent premature deterioration and keeps your roofing assets in top working order. With WTC's trained roofing technicians performing regularly scheduled inspections, housekeeping and maintenance, we ensure that problems are uncovered and corrected early to prevent costly emergency repairs. Keeping your roof in good shape can help lower your total roofing costs by significantly extending the roof's service life.

Available for any kind of roofing system, TremCare programs are carefully prepared and customized to suit your building and budget.

Protection Under One Roof

TremCare lets you choose the roofing maintenance and protection program that's right for you. And with OLI®, our On-Line Information system, we even support businesses that do not want the advantages of a TremCare maintenance program.

OLI represents the latest in Web-based information management systems. OLI eliminates the need for paper records and ensures that all information is current and consistent from user to user. OLI can manage any combination of drawings, photos, services activity reports, budgets, warranties, lifespan projections and much more. Data is available at all times in a secure, password-protected area of our website.

Leak Response

Some customers want us only to repair leaks and not to provide other maintenance activities. These customers can take advantage of our 24-hour-a-day leak line through the Tremsource® program.

Asset Management

If you want to manage your own roofing assets, WTC will conduct an extensive inventory of the condition of all your roofs to establish your immediate needs and then enter the data into OLI® for your use.

Additional Services

Besides offering these exceptional service programs to keep your roofs in peak condition, Weatherproofing Technologies Canada can also look "below the surface" to find problems.

A Thermocore® roof moisture analysis provides you with a detailed thermal map of hidden moisture. The data can be used to focus repairs on the roof's problem areas, saving money on repair work.

TRACE® and ACT® can answer questions about your roof's make-up. Our Roof Analysis Core Evaluation (TRACE) provides rigorous lab data on the construction, composition and condition of any built-up roofing system. ACT (Asbestos Core Testing) helps to accurately determine the exact percentage and type of asbestos found in each ply and the adhesive or mastic. ACT is included as part of a TRACE analysis.

TremCare, Thermocore, and TRACE and ACT analyses are but a few of the services that Weatherproofing Technologies Canada offer to extend the life cycles of your roofs and facilities. To learn more about how we can help you, please call your local WTC sales representative or visit us at www.weatherproofingtechnologies.ca.
